# Weekly Report, Period Ending November 26, 1993 EXPEDITED RESPONSE ACTIONS Technical and Management Contact - Wayne L. Johnson, 376-1721 Environmental Division

North Slope Expedited Response Action - The EE/CA has been revised to incorporate comments from DOE-HQ, RL, ACOE, and the regulators and is undergoing a final edit. Public review was initiated on November 8, 1993.

N-Springs Expedited Response Action - DOE-HQ, EPA, and Ecology's comments have been received and are being reviewed.

White Bluffs Pickling Acid Crib Expedited Response Action - A strategy is being prepared to address the September 7, 1993, letter concerning the requirements for issuing an Interim Record of Decision for the ERA site. An integrated schedule for reaching records of decisions for the Pickling Acid Crib, Sodium Dichromate site, and the Riverland site is in preparation.

618-11 Burial Ground Expedited Response Action - Regulator comments were received on September 28, 1993. Formal guidance has been provided by RL and the regulators to cease all work on this ERA, consistent with the recent TPA modifications. A closeout meeting with RL and the regulators was held on November 22, 1993.

<u>Riverland Expedited Response Action</u> - The final assessment report is under preparation.

<u>Sodium Dichromate Expedited Response Action</u> - The Sodium Dichromate ERA assessment report has been distributed.

200 West Area Carbon Tetrachloride Expedited Response Action – On November 12, 1993, vapor extraction operations resumed at the 216–Z-1A site. RL concurred on November 19, 1993, that the  $CCl_4$  vapor extraction system activities do not require a Type 5 Nuclear Facility Operational Readiness Review and the line management procedure was adequate. WHC approval for restart was issued following the RL concurrence. The 216–Z-1A system final walkdown and prestart checks were completed on November 12, 1993, with individual borehole characterization initiated on November 12, 1993. Characterization was completed on November 18, 1993 with full system operation commencing on November 18, 1993. The safety assessment for 216–Z-9 is being revised to incorporate new data which should allow operations to proceed with concentrations of  $CCl_4$  of less than 10,000 ppm. The planning documents will now be ready in mid-December. Five members of the operations team attended a five day training class in Albuquerque, New Mexico.
